

KENEXIS iMMS™

KENEXIS iMMS™ is the Internet-Enabled Instrumented-Safeguard Maintenance Management System. It is the optimal solution for automating the management and documentation of your mechanical integrity program for engineered safeguards.

Kenexis iMMS™ is based on foundation of Maximo®, and it is specifically designed for instrumented safeguards. iMMS™ can be used either as a stand-alone application or can be integrated into an existing Maximo® or even SAP® framework.

Using a software as a service architecture (SaaS), the data becomes available to users in real time, while retaining a close connection to Kenexis worldwide network of experts for support.

Common Concerns with Mechanical Integrity programs:

- How do I ensure that testing is being performed on a timely basis and results are properly documented?
- How do I allow multiple people or sites to enter, review and analyze data?
- How do I determine if test data for my instrumentation achieves the design requirements?

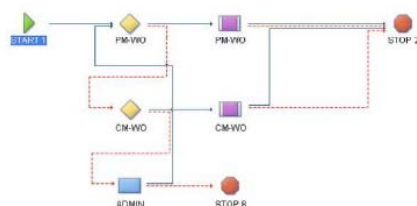

When your maintenance management system facilitates and automates these activities, it provides you with the ability to fully leverage the data and assure the ongoing performance of critical instrumentation.

Engineered safeguards include:

- Safety Instrumented Systems (SIS)
- Fire & Gas Systems
- Critical Alarm Systems
- Pressure Relief Devices
- Emergency Isolation Valves

Features of **KENEXIS iMMS™**

- Asset definition and maintenance tasks
- Work flow, job planning and approvals
- Job plan, JSA, and procedure documentation
- Automatic work order generation
- Test result input and tracking
- Corrective action documentation
- Test status results and reports
- Performance reports

KENEXIS iMMS™ is the premier toolkit for computerized maintenance management for engineered safeguards. Best-in-Class work processes, leverage of existing information, built-in reporting for international standards compliance, and support from the unparalleled expert in engineered safeguard design make this toolkit the solution of choice.

Consider the following ways Kenexis iMMS™ can save you time and money, while providing superior software that helps you address the critical needs of your organization...

✓ **Instant Productivity**

Simply enter your instrumented safeguard data and start managing your mechanical integrity program. You just need to turn it on, load your data - or have Kenexis load it for you, and get to work. Be assured that Kenexis analyzed industry best practices and implemented them as part of iMMS™.

✓ **Easy Data Migration**

Existing Kenexis studies can be directly ported to Kenexis iMMS™, allowing a very efficient migration. If your studies have been performed by other organizations, Kenexis can convert them into the Kenexis Toolkit formats for Kenexis iMMS™. This also allows for lifecycle management through additional services such as Kenexis Online™.

✓ **Data Analysis and Consulting**

Kenexis provides unparalleled expertise in the design and implementation of engineered safeguards. Our experts can assist in revalidation, troubleshooting equipment problems, or redesign that may occur as the result of data reporting from iMMS™. This allows a high level of vigilance and timely corrections when problems occur with critical instrumentation.

✓ **Multi-Site / Multi-User**

Kenexis iMMS™ allows real-time access for maintenance activity and mechanical integrity information by multiple users at multiple sites across an organization. This structure allows all stakeholders to have the relevant information at their fingertips when the situations demands it.

✓ **Comprehensive Support**

Kenexis removes the burden of deploying and maintaining a client/server database and application architecture. All of the headaches of software upgrades and system maintenance are removed. Kenexis iMMS™ includes both application support and engineering support. Application support is complimentary over the entire duration of a contract and engineering support is available in pre-paid blocks or on an as-needed basis.
